Q.2

What is Coronavirus and what are its symptoms?

Coronaviruses are a large family of viruses, some causes illness in people. Its symptoms in humans are

- 🤒 Fever
- 🤧 Breathing problem
- 🤧 Coughing
- 🤧 Tightness of chest
- 👃 Running Nose
- 🤯 Headache
- 🤒 Feeling unwell
- 🤒 Pneumonia
- 🩺 Kidney Failure

It can be difficult to identify the disease based on symptoms alone.

The screenshot shows the phpMyAdmin interface in a web browser. The address bar displays the URL: `localhost/phpmyadmin/server_privileges.php?db=db1&table=data&checkprivsdb=db1&checkprivstable=data&viewing_mode=table`. The interface includes a sidebar with a tree view of databases and tables, including 'db1', 'data', 'information_schema', 'mysql', 'performance_schema', 'phpmyadmin', and 'test'. The main content area is titled 'Users having access to "db1.data"' and contains a table with the following data:

User name	Host name	Type	Privileges	Grant	Action
<input type="checkbox"/> root	127.0.0.1	global	ALL PRIVILEGES	Yes	Edit privileges Export
<input type="checkbox"/> root	:::1	global	ALL PRIVILEGES	Yes	Edit privileges Export
<input type="checkbox"/> root	localhost	global	ALL PRIVILEGES	Yes	Edit privileges Export

Below the table, there are checkboxes for 'Check all' and 'With selected', followed by an 'Export' button. At the bottom, there is a 'New' section with an 'Add user account' button.

```
<?php
$fname = filter_input(INPUT_POST,'fname');
$lname = filter_input(INPUT_POST,'lname');
$age = filter_input(INPUT_POST,'age');
$email = filter_input(INPUT_POST,'email');
$mob = filter_input(INPUT_POST,'mob');
$type = filter_input(INPUT_POST,'type');

$host = "localhost";
$dbusername = "root";
$dbpassword = "";
$dbname = "db1";

$conn = mysqli_connect($host,$dbusername,$dbpassword,$dbname);

if($conn->connect_error) {
    die('Connection Failed : '.$conn->connect_error);
}
else
{
    $stmt = $conn->prepare("INSERT INTO data(FName,LName,Age,Email,Mob,Type) VALUES(?,?,?,?,?,?)");

    $stmt->bind_param("ssisis",$fname,$lname,$age,$email,$mob,$type);

    $stmt->execute();
    echo "Registered Successfully...";
    $stmt->close();
    $conn->close();
}

?>
